## Determining Ring Size

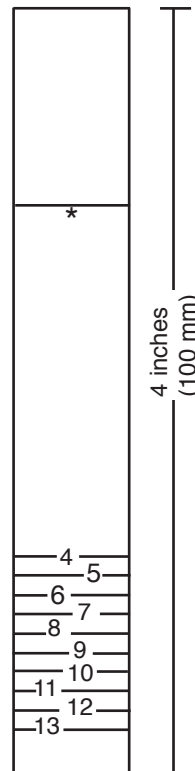

Use one the the two methods below to determine the correct size ring for your finger, or that of your intended ring recipient...

If your size falls between two sizes by either method, that would make it a half size.

If you already have a ring of the size you want to order, you can use the circles to the left. Place the existing ring over the circles until you find a match. Your ring should fit on the outer edge of the black circle, allowing you to see the whole circle inside your ring.

An option for finding a ring size without an existing ring is to print and cut out the pattern below. Wrap the pattern tightly around your finger. The number that hits the line with the \* is your ring size.

Make sure that your printer is set to 100%. The rectangle pattern above should measure 4 inches or 100 mm.
